

Dear Customer

◆ About the Upgrade of the DMC-G80/DMC-G81/DMC-G85 Firmware

The following functions were added or changed from Ver. 1.4 of the firmware. Please read this in conjunction with the owner's manual for the camera.

- The firmware version can be checked from the [Version Disp.] of the [Setup] menu.

[Aperture Ring Increment] has been added to the [Custom] menu.

The aperture value setting increments for operating the aperture ring can be changed.

- This can be used when using interchangeable lenses that support clickless aperture rings (H-X1025: optional). (As of July 2019)
- This works when the interchangeable lens aperture ring position is set to other than [A] during recording of picture.

MENU → f_C [Custom] → [Aperture Ring Increment]

[SMOOTH]	Allows fine setting of aperture values.
[1/3EV]	Allows setting of aperture values in 1/3 EV increments.

- If the aperture ring position is set to [A], then this enables the camera aperture value, and is the same setting as with [1/3EV].
- When recording motion pictures, this uses the same fine setting as with [SMOOTH].
- When set to [SMOOTH], fractions of aperture values are not displayed on the screen.

Shutter Remote Control (DMW-RS2: optional) is now supported.

[Video Rec. Button (Remote)] has been added to the [Custom] menu.

The motion picture button on the Shutter Remote Control (DMW-RS2: optional) can be disabled to prevent erroneous operation for when not recording motion pictures.

MENU → f_C [Custom] → [Video Rec. Button (Remote)]

Settings: [ON]/[OFF]
