

# Soft Bounce Mounting instruction

 **Profoto**

# About Soft Bounce

The Soft Bounce is designed to provide a soft and flattering light. It is perfect for close-up portraits and situations when you cannot use the flash for bouncing.

The Soft Bounce is clicked on to the flash with a smart magnetic mount. It can easily be stacked with other modifiers. When stacking several light shaping tools, make sure to first attach the Soft Bounce to the flash and then attach the other light shaping tools. This ensures the best fitting as Soft Bounce has extra strong magnets.

The Soft Bounce comes with a protective semi-soft case.

**Get started with  
your new Soft Bounce**

- 1 Open the case and pull out the Soft Bounce.

**2** The Soft Bounce will automatically fold up.

- 3** Click the Soft Bounce in place on the flash. Make sure it is directly mounted on the flash as this ensures the best fitting.
- 4** To remove the Soft Bounce from the flash, just pull it off.

- 5 Direct the flash towards the subject.  
For a softer light, be close to the subject.
- 6 Attach more Light Shaping Tools on top of  
the Soft Bounce if needed.
