Fujinon EPD-41A-D02 Focus Demand

1

Turn off the camera before installing the focus demand.

EPD-41A-D01/ D02

2

There are a series of function select switches ("dip switches") that allow you to assign functions to the two AUX buttons. Please make sure the lens power is off before operating these switches.

3

Switches 1 & 2 are assigned to AUX1.

Switch 1: On = Return switch 1.

Switch 2: On = Swap functions of the AUX1 and AUX2 switches.

4

Switches 3, 4, & 5 are assigned to AUX2; Switches 6, 7, & 8 are spares.

Switch 3: On = Return Switch 2.

Switch 4: On = Optical Stabilizer On.

Switch 5: On = Focus Preset.

Note: If more than two of these switches are on, the function with the smallest number has priority.

5

Switch 5 handles Focus Preset.

- **Setting Focus Preset Mode:** When AUX2 is pressed and held, the setting mode is selected and the indicator light flashes.
- **Storing Focus Preset Position:** Pressing AUX2 at the specified focus position stores it as a focus preset position, the setting mode is terminated, and the indicator light turns off.
- **Starting Focus Preset Function:** When AUX2 is pressed, the focus moves to the stored focus preset position. The indicator light will turn on.
- **Canceled Focus Preset Function:** When AUX2 is pressed again, the Focus Preset Operation is canceled. The focus will move to the position set by rotating the control knob, and the indicator light will turn off.

Please note: when the focus control knob is used while the Focus Preset function is on, the focus moves using the preset position as a reference point. It may not be possible to operate the focus simultaneous preset function, turn off SS1-2 on the zoom- when it's turned on, only the Preset Operation for zoom will be activated.

6

The operation of the zoom and focus simultaneous presets function can only be performed when both Lens and Focus Position Demand Unity are provided with digital control. When you perform the operation of the zoom and focus simultaneous preset function, turn off SS1-2 on the zoom- when it's turned on, only the Preset Operation for zoom will be activated.

Success!
