BLACK BALANCE	Camera Setup → ABB	Perform at start of day and after any dramatic change in operational temperature.

NOTES:

Canon Log 2 provides 16+ stops of dynamic range and allows for extended shadow detail retention. With this extended shadow detail often comes a slight increase in noise.

Canon Log 3 provides the same highlight retention however, one less stop in the shadows. This provides a cleaner image that is often easier to handle in a high volume post production process. If Canon Log 2 is captured, a 3D LUT is available from Canon to transform it into Canon Log 3, removing the shadow detail and therefore additional shadow noise, for a simpler post production process. Canon LUT's are available for [Download Here](#).

The BT.709 LUT in camera is the same as the BT.709_Wide DR LUT provided on Canon's Website.

When capturing in XF-AVC, all Canon Log formats are encoded as full range data (0-1023). On a 10 bit scale, Canon Log 3 and Canon Log have a black point of 128, and Canon Log 2 has a black point of 95. For more information about maximizing image quality using Canon Log, [please see this link](#).
