SP 15-30mm F/2.8 Di VC USD
(for Nikon, Canon)

SP 15-30mm F/2.8 Di USD
(for Sony *Models without the VC)

Model: A012

Nikon

Canon

Sony

* A012: This model is Built-in Motor

* Common with the Konica Minolta α mount
Thank you for purchasing the Tamron lens as the latest addition to your photographic equipment. Before using your new lens, please read the contents of this Owner’s Manual thoroughly to familiarize yourself with your lens and the proper techniques for creating the highest quality images possible. With proper handling and care, your Tamron lens will give you many years of photographing beautiful and exciting pictures.

- Explains precautions that help to prevent problems.
- Explains things you should know in addition to basic operations.

### NOMENCLATURE (Refer to Fig. 1, if not specified)

1. **Lens hood**
2. **Zooming ring**
3. **Focal length scale**
4. **Focusing ring**
5. **Distance index**
6. **AF/MF switch** (Figs. 3, 6 & 7)
7. **Lens attachment mark**
8. **Lens mount/Lens mount contacts**

### SPECIFICATIONS

### ATTACHING AND REMOVING THE LENS

#### How to mount the lens

Removing the rear cap of the lens. Align the Lens attachment mark on the lens barrel with its counterpart on the camera mount and insert the lens.

Rotate the lens clockwise until it click-locks. For Nikon models, align the lens attachment mark with the dot on the camera and rotate the lens counter-clockwise until it click-locks.

- **Ensure that the camera is turned off when attaching or removing the lens.**
- **For further details, please read the instruction manual of your camera.**

#### How to detach the lens

Pressing the lens release button on the camera down, turn the lens counter-clockwise (in case of Nikon lens, clockwise), and lift the lens off the camera’s lens mount.

- **Ensure that the camera is turned off when attaching or removing the lens.**
- **For further details, please read the instruction manual of your camera.**

### FOCUSING (Autofocus) and using the full-time manual function

In case of a Nikon or Canon camera, switch the AF/MF switch ③ on the lens to AF (Fig. 3). In case of a Nikon camera with the focus mode selector dial, set the focus mode to S, C or A, and then set the AF/MF switch ③ on the lens to AF. Press the shutter button halfway down while viewing through the camera’s viewfinder, the lens focuses automatically. An in-focus mark will light when lens focuses on the main subject sharply. Press the shutter button further to photograph.

- **Using the full-time manual function**

A012 is equipped with the full-time manual function. The full-time manual function is a function that the focus can be fine-tuned by the manual focus without switching the AF/MF changing switch when taking a picture of auto focus.

- **How to use the full-time manual function**

First, set the focus mode to “AF”.

You can adjust focus manually while turning the focus ring in the shutter button is pressed lightly.

- **The distance scale is marked for guidance purposes. The actual focal point may slightly differ from the distance marked on the focal length index.**
- **For further details, please read the instruction manual of your camera.**

### FOCUSING (Manual Focus) (Ref. Figs. 1, 2 & 3)

In case of a Nikon or Canon camera, switch the AF/MF switch ③ on the lens to MF (Fig. 3). In case of a Nikon camera with the focus mode selector dial, set the focus mode to M, and then set the AF/MF switch ③ on the lens to MF. Focus manually rotating the focusing ring ④ while viewing through the camera’s viewfinder (Fig. 2). The main subject in the viewfinder will be sharp when the lens is focused correctly.

- **Even in the MF mode, when turning focusing ring ④ while pressing the shutter button halfway, the focus aid function lamp lights up when the picture is in focus.**
- **At infinity, make sure the image in the viewfinder appears sharp. The infinity position is marked with certain allowances to insure proper focus under a variety of conditions.**
- **For further details, please read the instruction manual of your camera.**

### VC MECHANISM (Ref. Figs. 4, 5 & 6) (Mounted for Nikon and Canon models)

VC (Vibration Compensation) is a mechanism which reduces the image blur caused by hand-held shooting.

#### How to use VC mechanism

1. Set the VC switch ① on.

- When the VC is ON, the number of images recorded is reduced due to the power used from the camera.
- When the VC is ON, immediately after the shutter button is pushed halfway down and approximately 2 seconds after a finger releases the shutter button, the camera will “click”. This sound is the VC’s locking mechanism activating, not a malfunction.
- Turn the VC switch OFF when using tripod.
- After releasing the shutter button, the VC will continue to operate for about 2 seconds until the locking mechanism activates.

- **With the VC mechanism, there are occasions that the image in the viewfinder blurs right after the shutter button is pressed down halfway, but this is not a malfunction.**
- **When the VC is ON, the number of images recorded is reduced due to the power used from the camera.**
- **When the VC is ON, immediately after the shutter button is pushed halfway down and approximately 2 seconds after a finger releases the shutter button, the camera will “click”. This sound is the VC’s locking mechanism activating, not a malfunction.**
- **Turn the VC switch OFF when using tripod.**
- **After releasing the shutter button, the VC will continue to operate for about 2 seconds until the locking mechanism activates.**

#### LENS HOOD

The lens hood is installed as standard. It is fixed to the lens and cannot be removed.

### PRECAUTIONS IN SHOOTING

- The optical design for Di takes into consideration the various features of digital single reflex cameras. However, due to the configuration of the digital single reflex cameras, even when the autofocus accuracy is within specifications, the focal point may be a little forward or behind the optimum point when shooting with autofocus under some conditions.
- The Tamron lenses described here employ an internal focusing (IF) system. Because of the characteristics of this optical design, the angles of view at distances other than infinity are wider than that of the lenses applying an ordinary focusing system.
- When the built-in flash on the camera is used, the light from the flash may be blocked by the lens and hood shadow may appear at the bottom of the image. Vignetting may also be observed when using a separate flash depending on your equipment and the shooting conditions.
- Certain camera models may indicate the maximum and minimum aperture values of the lens in approximate numbers. This is inherent to the design of the camera and not an indication of an error.
- Please be aware that there is no infrared index line on any models listed in this owner’s manual, and therefore, practically, no black-and-white infrared film can be used with these lenses.
- This lens is an ultra-wide-angle lens. Due to the shape of the front element, it is not possible to attach filters to prevent vignetting. It is also not possible to install rear filters.

### TO ENSURE LONG-TERM SATISFACTION

- Avoid touching the glass element surface. Use a photographic lens cloth or blower to remove dust from the lens element surface. When not using the lens, always place a lens cap on it for protection.
- Use a lens cleaning tissue or lint cloth with a drop of cleaning solution to remove fingerprints or dirt on the glass lens surface with a rotary motion from the center to the edge.
- Use a silicon cloth to clean your lens barrel only.
- The front element has been coated to prevent water and oily substances from adhering. This coating will repel liquids such as lens cleaners. To clean the lens, we recommend at the end to wipe it with a dry cloth.
- Mildew is an enemy of your lens. Clean the lens after shooting near water or in any humid place. Store your lens in a clean, cool and dry place. When storing the lens in a lens case, store it with commercially available drying agent such as silica gel, and change the agent occasionally. If you find mildew on your lens, consult an authorized repair shop or nearby photographic store.
- Do not touch the lens-camera interface contacts since dust, dirt and/or stains may cause a contact failure between the lens and camera.
- When using your equipment (camera(s) and lens(es)) in an environment where the temperature changes from one extreme to the other, make sure to put your equipment temporarily in a case or a plastic bag for a length of time in order for the equipment to go through a gradual temperature shift. This will reduce potential equipment trouble.

### ZOOMING (Ref. Figs. 1, 2 & 3)

Rotate zoom ring ② of the lens while viewing through the camera’s viewfinder and compose your image at the chosen focal length.
How to Avoid Camera Shake

When using the lens in the telephoto focal range, please be careful with the camera shake. To reduce image blur, turn the VC (Vibration Compensation) switch on.

To reduce image blur without using the VC function, follow the steps below.

To avoid camera shake, for the digital cameras, use an ISO setting of higher numbers and for the film cameras, use the film with high ISO numbers to obtain higher shutter speed. Using a tripod or monopod is also effective.

When hand-holding the camera to take pictures, stand still, with legs slightly apart, hold your elbows in firmly against your chest, and hold the camera firmly against your face. If possible, lean against something to steady yourself or place the camera on something to secure the hold. Especially when hand-holding your camera, you will be steadier if you hold your breath, while you press the shutter button gently and firmly.

Using camera’s built-in flash

When using the camera’s built-in flash, please be aware that the lens hood or lens barrel may block the light to cause vignetting on the image. When using the camera’s build-in flash, do not use a lens hood. Even without a lens hood, vignetting (arch shaped shadow) may appear if the light is blocked by the lens barrel, so it is advisable to use an optical flash unit (hot shoe or handle-mount type). The conditions; such as, the focal length and focusing distance cause the vignetting vary depending on the camera. It is recommended to test for vignetting at each focal length and focusing distance.

Suggestions for Better Pictures with Tamron Zoom Lenses

For safe operation be sure to carefully read the manual and the following cautions before using. After reading them, store them in a place where they can easily be reviewed whenever needed. In this manual, caution instructions are divided into the following two categories:

⚠️ WARNING
This indicates instructions which if not heeded could lead to death or serious injury.

⚠️ CAUTION
This indicates instructions which if not heeded could lead to bodily injury or physical damage.

⚠️ WARNING
(1) Do not look directly at the sun through the lens. Doing so could result in blindness.
(2) Do not leave the lens within the reach of young children. The lens may fall and injure the child, and the strap may get wrapped around the child’s neck, resulting in suffocation.

⚠️ CAUTION
(1) Do not leave the lens in places exposed to direct sunlight. The light reflected off the lens may focus on a nearby object, and cause a fire. Place the lens cap on the lens whenever it is not in use.
(2) When mounting the lens on the camera, make sure the lens and camera are properly set and securely locked. The lens may get stuck if it is not properly mounted, and if it is not securely locked, it may fall off, damaging the lens or camera or causing bodily injury.
(3) Do not modify or alter the lens. Doing so may result in damage to the lens or camera.
(4) Mount the lens hood when taking photographs in order to eliminate harmful light rays.
* The hood cannot be mounted when certain filters are installed.
* Remove the hood if it causes shadows at the edges of the image when using a flash.
(5) Do not place excessive loads on the lens when it is mounted on the camera. Such loads may damage the mount section on the lens and the camera. Large lenses tend to place a strong load on the mount section. Always hold the lens when operating and moving the camera.
(6) The focus ring turns during the auto focus operation. Do not keep the focus ring from turning. Also, do not forcibly turn the focus ring by hand when in the auto focus mode. Doing so may damage the lens or the interior of the camera.
(7) Do not use the lens except for the purpose of photographing.
