

Overview

The Helix MagLock™ Filter System was developed to both eliminate the hassle of threading filters on and off, while also providing a filter that's safely locked in place once installed. Unlike other magnetic filter systems on the market; Helix provides a completely secure connection using our magnetic + quarter-turn locking mechanism, making it lightning-fast to install/remove filters while also ensuring they stay locked in position during the most demanding shooting situations. Seriously, these filters won't go anywhere until you're ready to remove them from your lens! With available 67mm, 72mm, 77mm, and 82mm brass thread bases, Helix will easily cover your entire lens arsenal.

Features

- A fully-seamless filter experience - never thread on a filter again.
- New MagLock™ system features magnets that bind the filter and thread base together while a quarter turn locks the system in place.
- Quickly and seamlessly remove filters using the release tabs.
- Rubber frame insert provides more grip compared to aluminum filter frames.
- Brass filter frames and thread plates for smooth connections.
- Front and back Defender360™ for unrivaled protection during transport and storage.
- Available 67mm, 72mm, 77mm, and 82mm thread bases for your entire lens quiver.

Helix MagLock - Chris Burkard Edition Lineup:

Helix CP Kit

SKU: BRK-CP-KIT

UPC: 817465028193

Product Description:

Kit Includes: 77mm Thread Base, 82mm Thread Base, Circular Polarizer (CP) Filter, Defender360™ filter case (front & rear Defender protection for the CP filter)

Helix 4-Slot Filter Case

SKU: BRK-CASE

UPC: 817465028391

Product Description: The Helix Chris Burkard Edition Filter case offers a storage & carry solution for up to four Helix MagLock system filters. This soft pouch includes storage slots to keep the filters securely in place while an internal microfiber cloth provides a quick cleaning solution before storing or mounting onto the lens.

Helix Circular Polarizer (CP) Filter

SKU: BRK-CP

UPC: 817465028209

Product Description: A circular polarizer filter is a landscape photographer's most sought-after camera accessory as it helps bring contrast and vivid, natural saturation to a photograph.

Normally, a CP is used for landscape compositions featuring water, snow, ice, blue skies, and foliage as it can help darken the sky, remove reflections, and reduce unwanted glare from the scene.

Neutral Density Filters

Neutral Density Filters have an evenly distributed coating throughout the lens that provides light filtration by a certain degree of strength. The strength of the filter can be referred to by f-stops. The three filters range from 3-stops (ND8) to 6-stops (ND64) to 10-stops (ND1000).

Helix ND8 Filters

SKU: BRK-ND8

UPC: 817465028216

Product Description: This ND8 filter for the Helix MagLock System offering a 3-stop reduction is great for videography use cases when controlling shutter speed for wider apertures in darker lighting scenarios such as dawn or dusk.

Helix ND64 Filter

SKU: BRK-ND64

UPC: 817465028223

Product Description: This ND64 filter for the Helix MagLock System offering 6-stops of reduction works great for multiple applications and use cases. It can be used for both videography and photography, either for shutter speed control with wide apertures or creative long-exposure photography.

Helix ND1000 Filter

SKU: BRK-ND1000

UPC: 817465028230

Product Description: This ND1000 filter for the Helix MagLock System offering a 10-stop reduction is best used for creative applications, ideally long-exposure photography in bright, mid-day conditions.

Neutral Density - Polarizer Filters

Neutral density + polarization filters, or ND/PL filters for short, are a unique type of camera filter that combines two popular filter effects together into a single glass element. ND/PL filters combine a polarized glass element with a neutral density coating of a specified strength for slowing shutter speeds with improved contrast and color saturation.

Helix ND8/PL Filter

SKU: BRK-ND8/PL

UPC: 817465028711

Product Description: This ND8/PL filter for the Helix MagLock System offering a 3-stop reduction is great for videography use cases when controlling shutter speed for wider apertures in darker lighting scenarios such as dawn or dusk with the added benefit of improved contrast and color saturation from the polarizer.

Helix ND64/PL Filter

SKU: BRK-ND64/PL

UPC: 817465028728

Product Description: This ND64/PL filter for the Helix MagLock System offering 6-stops of reduction works great for multiple applications and use cases. It can be used for both videography and photography, either for shutter speed control with wide apertures or creative long-exposure photography with the added benefit of improved contrast and color saturation from the polarizer.

Helix ND1000/PL Filter

SKU: BRK-ND1000/PL

UPC: 817465028735

Product Description: This ND1000/PL filter for the Helix MagLock System offering a 10-stop reduction is best used for creative applications, ideally long-exposure photography in bright, mid-day conditions with the added benefit of improved contrast and color saturation from the polarizer.
