Note:

- This table will be updated in line with firmware update and is subject to change without prior notice.
- For Sony cameras, after connecting stabilizer and camera with control cable, power on the stabilizer and then the camera. Make sure the camera is fully charged. Optical zoom control is available on the stabilizer when used with motorized lens. Digital zoom control is available on the stabilizer when used with non-motorized lens. Please select zoom option in your camera's settings.
- When shooting panorama or timelapse, it's recommended to turn off auto review in the Sony camera, turn off auto review and duration time(photo) in the Panasonic camera, turn off image review in the Nikon camera to reduce system latency.
- Canon DSLRs cannot realize the halfway press shutter button to autofocus in Live Preview. If the feature is used, the camera Live Preview mode should be turned off.
- When connecting a control cable to a Panasonic G9, turn off the USB Power Supply in the camera settings.
- After connecting Olympus cameras to CRANE 2S, there will be a prompt on camera screen for you to choose USB mode. Please choose (PC control) and turn camera mode dial to P, A, S, or M mode.
- In Photo mode of Fujifilm, camera parameter control from camera is disabled and you can only adjust camera parameter via stabilizer. Press LV button of stabilizer to resume parameter control of your camera and press LV button again to return to stabilizer control; Fujifilm doesn't support saving photos in RAW format.
- The "Real-time Preview" feature is for user to switch between electronic viewfinder and optical viewfinder in DSLR by single-clicking the LV button of the stabilizer.
- For Canon mirrorless cameras, switch the shooting mode to photo mode before taking photos. When shooting a video is needed, switch the shooting mode to movie mode. Please turn off your camera before switching modes. For EOS R/RP/R5/R6, shutter release can't be used to control video shooting in photo mode otherwise the camera may freeze. (In this case please take out the camera batteries and reinstall and turn on the camera again)
- "√" means the camera can realize the function after connecting to the stabilizer; "x" means the camera currently cannot realize the function after connecting to the stabilizer, but there're possibilities that the function may open by a firmware update or other ways. "-" means the uncontrollable functions after connecting to the stabilizer is because the camera control protocol is not opened.
